FITTING INSTRUCTIONS

- To fit the R&G Exhaust Hangers, the OEM pillion footrest mounting brackets needs to be removed.
- To do this, first remove the seat & rear seat cowl (as shown in **Picture 1**). This will allow access to the two bolts at the top of the pillion footrest mounting bracket (**Picture 2**) which should then be removed.
- Remove the OEM bolt through from the bracket on the top of the exhaust silencer (as shown in **Picture 3**).
- You can then remove the OEM pillion footrest mount from the motorcycle.
- Take the R&G Exhaust Hanger (**Item 1**) and fit the two M8 x 25mm long button head bolts (**Item 2**) and M8 washers (**Item 4**) through the two top mounts of the exhaust hanger as shown in the **Assembly Diagram**.
- Offer the exhaust bracket into position and engage both bolts into the pillion foot peg mounting holes (do not fully tighten at this stage).

- With the exhaust hanger loosely mounted on the motorcycle, ensure the lower part of the exhaust hanger is on the outside of the exhaust mounting bracket.
- Place the M8 x 25mm button head bolt (**Item 3**) through the M8 washer (**Item 4**) and the exhaust hanger, before fitting the nyloc nut (**Item 5**) onto the exposed thread of the bolt and loosely tighten as shown in the **Assembly Diagram**.
- Ensure the exhaust hanger is correctly fitted before tightening all three bolts.
- Repeat the above steps for the RHS of the motorcycle.
- Refit the body panels removed in previous steps.
- Please ensure when the motorcycle is being used that no parts are in such a position that they may collide/damage other bike parts (this is particularly important if using after-market cans or exhaust systems).

Please note that it is your responsibility to ensure that no part of the exhaust hanger or exhaust assembly fouls or comes into contact with other parts of the machine. Do not ride the motorcycle until this aspect has been verified and you have compressed the rear suspension (if appropriate to the design of the motorcycle) to test this thoroughly.
